

## ARTIST STATEMENT

My work is focusing on a personal photography with an artistic approach. The center of attention in my work belongs to the human beings as a unique individual. Through my photographic work I research how the human beings impose upon themselves against the power of the social and political system of the certain country, how and till what measure has that political and social system impact on the body, mind and living condition. For me photography is not a way to only look at the world, but a way to live the world, to take a position. I try to fight the prejudices and social injustice in the world. It is an activist art which search for the visual strategies of how to give a voice to the ones who has very little power to defend themselves within the system that govern their way of being. In my body of work I tend to go deeper to the problematic of the subject, in order to avoid shallowness and emptiness. Important is that my work ask questions, not answers, but leads to the further dialogue and solutions.
